Bankstown, Sydney NSW | <https://www.tuong-tan-dev.com/> | Full Australia working rights, no restrictions.

PROFILE SUMMARY

Software Developer with 3 years of experience delivering full-stack solutions for global enterprise clients. I thrive in fast-paced, Agile environments, proficient in modern frontend technologies including Vue.js, React/React Native, JavaScript/TypeScript, and backend development using .NET (C#), Java Spring Boot, and Node.js. Experienced with multiple database tools and cloud-based development using Azure DevOps, AWS. I am also familiar with modern AI tools and LLMs.

TECHNICAL SKILLS

- Frontend: JavaScript/TypeScript, Vue.js, React/React Native
- Backend & APIs: .NET (C#), Java, Node.js, Express.js, RESTful APIs, GraphQL
- Databases & Data: SQL, XML, Json
- Tools & DevOps: Git, Azure DevOps, Google Cloud, AWS
- CMS & Platforms: Adobe Experience Manager (AEM)
- AI & LLMs: LLMs, AI-assisted development, prompt engineering, OpenAI API

WORK EXPERIENCE

Netcompany Software Developer

Jul 2022 - Feb 2025

Netcompany - an European IT consultancy delivering digital solutions for large enterprises and government clients. During my time here, I have gained real, professional experience in development, planning, testing, communicating in multiple projects with international teams, stakeholders.

- May 2023 - Completed training in Denmark, gaining hands-on experience applying Agile principles across the full development lifecycle, delivering project within a short time-frame.

Netcompany

Full stack developer (CMS web using AEM)

Jul 2022 - Jul 2024

Tech stack: AEM, Vue.js, Java Springboot, MySQL, XML, GraphQL, JUnit, Algolia

- Developed and maintained an enterprise-grade CMS website using Adobe Experience Manager (AEM) and Vue.js, delivering scalable and secure content solutions for global clients in the pharmaceutical industry.
- Built reusable AEM components, templates, content structures with XML, Sling Models, Content Fragments to support enterprise needs.
- Configured workflows, managed web configurations, and integrated AEM with Java Spring Boot services and GraphQL APIs for seamless backend–frontend communication.
- Leveraged the JCR content repository and implemented Algolia search to improve content management and retrieval performance by 90%.
- Delivered the project ahead of schedule, enabling the client to launch their website ahead of their big release, strengthening trust and securing contract extension and plans to invest further by expanding the development team.

Netcompany

.NET Backend developer (Data migration system)

Jul 2024 - Feb 2025

Tech stack: .NET, RESTAPI, SQL Server, DBeaver, Azure Devops

- Designed and operated secure .NET C# data-migration pipelines for a telecommunication client, transferring large volumes of legacy data to modern platforms and achieving 95%+ successful record migration while maintaining data integrity and validation standards.
- Improved data quality and system readiness by defining new data models and enriching incomplete records through third-party API integrations and automated validation.
- Increased reporting efficiency by 80% using advanced SQL (SQL Server, DBeaver) to analyse migration results, troubleshoot failures, and generate actionable insights.

Career break/ Professional development

Mar 2025 - Present

- Relocated to Australia and used the transition period to reflect on my career direction, research the market, and strengthen technical skills.
- Focused on AI, cloud technologies, and modern development practices, earning cloud certifications and building personal software projects.
- Continued hands-on development through projects such as an AI-powered Travel Planner and personal portfolio, while keeping up with current technology and industry trends.

PERSONAL PROJECT

AI Travel Planner [TuongTan-Heli/Travel-Planner](https://github.com/TuongTan-Heli/Travel-Planner)

<https://travel-planner-olive-pi.vercel.app/>

Jul 2026 - Sep 2026

An **AI-powered** conversational travel planning application to transform conversational trip requirements into structured, personalised itineraries.

Tech stack: C#, .NET 8 / ASP.NET Core, React, TypeScript, Google Gemini API (LLM), MongoDB, WebSockets, REST APIs, AWS EC2, Nginx, Vercel, JSON

- Designed a multi-stage LLM workflow covering user intent extraction → location selection → candidate scoring → itinerary generation, with each stage consuming structured context from the previous stage.
- Implemented structured JSON prompting and response parsing to reliably transform LLM output into strongly typed application models.
- Built a stateful WebSocket conversation layer to maintain user-system context and travel preferences throughout multi-stage conversations.
- Used external APIs to enrich AI-generated recommendations with real-world data from weather forecasts/historical weather, maps and places, and currency exchange APIs.
- Reduced LLM API calls, token usage, and unnecessary context by ~60% through staged processing, selective data retrieval, and clear boundaries around location and candidate selection.
- Integrated MongoDB for storing travel sessions and conversation state, with the application deployed using AWS EC2, Vercel, and Nginx.

Portfolio <https://github.com/TuongTan-Heli/Portfolio>

<https://www.tuong-tan-dev.com/>

Sep 2025

Tech stack: Reactjs, Typescript, Json, Tailwindcss, Framer motion, Vercel

- Developed a responsive portfolio website using React, TailWindCS to support dynamic content, good UI system across multiple devices.
- Built reusable React components, integrated Framer Motion animations, React hooks to optimize state management and create smooth, interactive user experiences.

EDUCATION

Bachelor of Science and Technology

University of Greenwich Viet Nam

2019 - 2022

CERTIFICATIONS

- Microsoft - AZ-900 Certification - Azure Fundamentals - Mar 2023
- Adobe - AEM Professional Developer - Jun 2024
- Amazon Web Services - AWS Certified Cloud Practitioner - May 2026
